(57) Abstract :

The current invention is novel equipment for healing various cancers and chronic diseases by creating an optimized environment mimicking the human womb. The parameters such as pressure, temperature, osmolality in this equipment also mimic that of the inside of human womb. The artificial conditions of this womb-like equipment could be altered for selectively enhancing or reducing the effect/uptake/excretion/retention of specific substances/chemicals, gases. The equipment also uses electromagnetic waves and/or radiations and/or sound vibrations for treatment of cancer, chronic diseases or medical conditions by promoting healing properties. The components used in this equipment may include antioxidants, vitamins, electrolytes/trace elements, chemicals and immune serum, biomolecules which have properties to modulate the immune and other bodily functions for promoting the repair mechanism associated with disease etiology. The equipment can produce significant modulatory effect on the human body to accelerate cure, remove toxins and undesired molecules from the system. The equipment uses the skin and/or other body parts for producing the modulatory effect. The equipment also has capability to introduce substances and gases into the human body through injection or other natural orifices.
